

This is unreleased documentation for Serverpod **Next** version.

For up-to-date documentation, see the [latest version](#) (4.0.0).

3..54.7

GENERATE

 Copy as Markdown

serverpod generate

`serverpod generate` reads your model and endpoint definitions and generates the server and client Dart code that connects them. Run it whenever you add or change a model or an endpoint.

Pass `--watch` to regenerate automatically as you edit, or `--force` to rebuild after hand-editing generated files. For what gets generated, see [Working with endpoints](#) and [Models](#).

Usage

Generate code from yaml files for server and clients.

Usage: `serverpod generate` [arguments]

<code>-h, --help</code>	Print this usage information.
<code>-w, --watch</code>	Watch for changes and continuously generate code.
<code>-d, --directory</code>	The directory to generate code for (defaults to current directory). (defaults to "")
<code>-f, --force</code>	Regenerate even when the output looks up to date. Use this to rebuild after hand-editing or reverting generated files.

Run "`serverpod help`" to see global options.
