UPGRADE

 Copy as Markdown

serverpod upgrade

`serverpod upgrade` updates the Serverpod CLI to the latest version.

For the version-specific steps when moving between major releases, see the [Upgrade to 4.0](#) guide.

Usage

Upgrade the Serverpod CLI to the latest version.

Usage: `serverpod upgrade` [arguments]

<code>-h, --help</code>	Print this usage information.
<code>--channel</code>	Which published versions to consider. Defaults to following prereleases when a prerelease is installed, and stable releases otherwise.
<code>[stable]</code>	Only install stable releases
<code>[any]</code>	Install the newest version, including prereleases
<code>--version=<version></code>	Install a specific version instead of the newest one in the channel. This is the only way to move the installation backwards.
<code>-f, --force</code>	Install even when the installed version is already the target, or when the CLI being run is not the one that would be replaced.

Run "`serverpod help`" to see global options.
