

This is unreleased documentation for Serverpod **Next** version.

For up-to-date documentation, see the [latest version](#) (4.0.0).

3.1.3

COMMUNITY-SUPPORTED DEPLOYMENTS

 Copy as Markdown

Community-supported deployments

Serverpod can be deployed in multiple ways, and the community has developed tools to simplify the process. While these tools are not officially maintained by the Serverpod team, they can be a great starting point for getting your server up and running quickly.

Virtual Private Server (VPS)

[serverpod_vps](#) provides a simple way to deploy Serverpod on a Virtual Private Server using Docker-Compose. The CLI creates all required files and the detailed step-by-step guide will help you get your server up and running in no time.
